

CUSTOMER SUPPORT TECHNOLOGIES – PRECISELY!

Makino's invitation
September 16 - 21, 2019
Hall 12, Stand B36

Dear Business Partner,

The evolution in the production landscape is accelerating. The e-mobility is radically changing the demand on car components. New requirements regarding machining processes and equipment are rapidly developing. Digital twins, projection models and smart automation are boosting speed and performance in the manufacturing industry and opening the way for digitalisation.

Facing the various aspects of this new environment, we cordially invite you to visit Makino at EMO 2019 to experience how Makino's digitalisation path, **Customer Support Technologies – Precisely!**, can enhance our understanding of advanced production.

At this year's EMO, Makino will exhibit a wide spectrum of new technologies on more than 1,200 m², featuring horizontal and vertical 5-axis as well as EDM solutions for industrial components as well as die and mould applications. Numerous **Customer Support Technologies** will be exhibited, highlighting automation, machine monitoring, predictive maintenance, voice control, augmented reality as well as autonomous production.

September 16-21, 2019
Hall 12, Stand B36

Don't miss this opportunity to experience Makino's #ReferenceClass. Enjoy the live demonstrations and discuss new possibilities to improve your productivity and competitiveness with our experts.

We look forward to meeting you at EMO 2019 in Hannover!

Best regards,

Urko J. Ugalde
